Apex Systems - Response to RFP-2026-017

RFP-2026-017: Supplier Contract Management Platform. The buyer needs a cloud platform to store contracts, track obligations and renewals, integrate with its ERP and identity provider, and go live within 6 months for about 800 users.

1. Executive Summary and Understanding of the Requirement

Apex Systems proposes a modular, API-first contract platform on a multi-region cloud architecture. We have read RFP-2026-017 and understand the need for obligation tracking, renewal alerts, ERP integration and single sign-on for 800 users.

Our design favours scalability and security over speed of delivery, which is reflected in a premium price and a 7-month schedule.

2. Proposed Solution and Implementation Approach

Architecture: microservices on Kubernetes with an event bus, a document store with full-text search, and a rules engine for obligation alerts. Horizontal autoscaling is tested to 5,000 concurrent users, six times the stated need.

Integrations: certified connectors for SAP and Oracle ERP via REST and message queues, SAML 2.0 / OIDC single sign-on, and a documented public API with 140 endpoints. Data migration uses an automated import tool with validation reports.

Approach: discovery, build in four increments, user acceptance testing, phased roll-out by department.

3. Timeline, Team Structure and Milestones

Total duration 7 months. Milestones: M1 discovery and design sign-off (month 1), M2 core platform (month 3), M3 ERP integration complete (month 5), M4 UAT (month 6), M5 go-live (month 7).

Team: 1 programme manager, 1 solution architect, 5 engineers, 2 QA engineers, 1 security engineer, 1 change manager. Named leads are provided in Appendix A.

4. Price Table and Assumptions

Item	Cost (USD)
Licences, 800 users, 3 years	612,000
Implementation services	340,000
Data migration	55,000
Training	30,000
Total (3 years)	**1,037,000**

Assumptions: Prices exclude taxes and travel. Up to 20 custom reports included; extra reports at 1,800 USD each. Annual licence uplift capped at 4%.

5. Security, Compliance and Risk Controls

Certifications: ISO 27001 and SOC 2 Type II, audited annually; reports available under NDA. GDPR compliant with EU data residency option.

Controls: encryption at rest (AES-256) and in transit (TLS 1.3), role-based access with quarterly access reviews, immutable audit logs retained 7 years, annual third-party penetration tests, and a 4-hour incident notification commitment.

Risks: ERP interface complexity and data quality. Mitigation: early integration spike and a migration dry run.

6. Support Model, Relevant Experience and References

24x7 support with a 30-minute response for severity 1 and a named customer success manager. 99.95% uptime SLA with service credits.

Experience: 14 comparable contract platforms delivered in the last 5 years. References: a European bank (2,100 users) and a logistics group (900 users); contacts available on request.
